

712CD

75TH MORSS CD Cover Page

If you would like your presentation included in the 75th MORSS Final Report CD it must :

1. Be unclassified, approved for public release, distribution unlimited, and is exempt from U.S. export licensing and other export approvals including the International Traffic in Arms Regulations (22CFR120 et seq.);
2. Include MORS Form 712CD as the first page of the presentation;
3. Have an approved MORS form 712 A/B and
4. Be turned into the MORS office no later than: **DEADLINE: 14 June 2007 (Late submissions will not be included.)**

Presentation Title: Methodologies, Models, and Simulations Research for the Analysis of Stability Operations

Author Request (To be completed by applicant) - The following author(s) request authority to disclose the following presentation in the MORSS Final Report, for inclusion on the MORSS CD and/or posting on the MORS web site.

Name of Principal Author and all other author(s):

Ms. Kerry Lenninger, LTC Francisco Villanueva, and MAJ David Lindow

Principal Author's Organization and address:

TRAC-FLVN, 255 Sedgwick Ave, Ft. Leavenworth, KS 66027-2345

Phone: (913) 684-9243

Fax: (913) 684-9288

Email: Kerry.Lenninger@us.army.mil

Please use the same title listed on the 75TH MORSS Disclosure Form 712 A/B. If the title of the presentation has changed please list both.)

Original title on 712 A/B: Methodologies, Models, and Simulations Research for the Analysis of Stability Operations

If the title was revised please list the original title above and the revised title here:

PRESENTED IN:

WORKING GROUP: 16	Special Operations and Irregular Warfare	DEMONSTRATION:	
COMPOSITE GROUP:		POSTER:	
SPECIAL SESSION 1:		TUTORIAL:	
SPECIAL SESSION 2:		OTHER:	
SPECIAL SESSION 3:			

This presentation is believed to be: **Unclassified, approved for public release, distribution unlimited, and is exempt from U.S. export licensing and other export approvals including the International Traffic in Arms Regulations (22CFR120 et seq.)**

Report Documentation Page				Form Approved OMB No. 0704-0188	
Public reporting burden for the collection of information is estimated to average 1 hour per response, including the time for reviewing instructions, searching existing data sources, gathering and maintaining the data needed, and completing and reviewing the collection of information. Send comments regarding this burden estimate or any other aspect of this collection of information, including suggestions for reducing this burden, to Washington Headquarters Services, Directorate for Information Operations and Reports, 1215 Jefferson Davis Highway, Suite 1204, Arlington VA 22202-4302. Respondents should be aware that notwithstanding any other provision of law, no person shall be subject to a penalty for failing to comply with a collection of information if it does not display a currently valid OMB control number.

Methodologies, Models, and Simulations Research for the Analysis of Stability Operations

**75th Military Operations Research Society
Symposium**

13 June 2007

Purpose and Bottom Line

- **Purpose.**
 - Present results of research efforts.
 - Research methodology.
 - Selection process and tool.
 - Viable methodologies, models, & simulations (MM&S).
 - Discussion/Q&A.
- **Bottom Line.**
 - Developed and applied a stability operations (SO) MM&S **selection process** and **tool**.
 - Developed a database of 30 applications.
 - Assessed and ranked them on functionality and utility.

Agenda

- **Background.**
- **Problem definition.**
- **Constraints, limitations and assumptions.**
- **Research methodology.**
- **Assessment cross-walk (issues, tasks, functionalities).**
- **Results.**
 - **Functionality assessment.**
 - **Utility assessment.**
 - **Relative ranking.**
 - **Application process.**

Background

- **TRADOC Standard Scenarios.**
 - Corps/Division Southwest Asia Stability Operations scenario (SWA SO).
 - Bde Mega-City scenario.
- **TRAC Stability Operations Functional Area Analysis (FAA).**
- **HQDA Stability, Security, Transition, and Reconstruction (SSTR) gap analysis.**
 - TRAC and CAA partnership with HQDA to conduct Army capability and capacity gap analysis for SO functions.
- **TRAC SO MM&S research.** 
 - What should we model?
 - What can't we model in our M&S?
- **Future Combat Systems (FCS) Stability and Reconstruction Operations (S&RO) analysis for FY08 and beyond.**
 - Identify the S&RO analytic issues.
 - Conduct S&RO first order comparative analysis between BCTs.
 - Conduct a model and data review and develop recommendations to enhance representation of phenomenon in the S&RO environment.

Problem Definition

- Purpose of research/specified task: Determine usable MM&S to support the analysis of SO.
- Implied task for the research team: Examine existing MM&S to the degree that **an assessment is possible in determining the utility of the MM&S for the intended analysis purpose.**
- Accuracy of the answer. Deliverable(s) must have **viable applicability in addressing issues of interest**, emphasizing the capability of portraying cause and effect relationships.
- Research scope. Focus is on MM&S capability and utility in support of operational level SO analyses.

Bauman's Law: Assess no model and compare no model to another model outside the context of its intended purpose and applications.

Constraints, Limitations, and Assumptions

- **Constraints.**

- Report complete by Apr 07.
- Stability operations (SO) scenario development drove desired MM&S functionalities.
- TRAC will not use a MM&S without access to underlying code and supporting data (no black box).

- **Limitations.**

- Research effort is focused on MM&S that support operational level analyses.
- Limited TRAC experience and knowledge of available SO MM&S; reliant on MM&S point of contact (POC) feedback on questionnaires and surveys. Must consider POC possible bias.
- Research effort does not include a formal cost analysis.
- MM&S capabilities assessed using potential issues (not actual study specific issues).
- MM&S assessment based only on a subset of the tasks in the Functional Area Analysis for SO (i.e., original task list from SO scenario development).
- The MM&S assessment did not include federated combinations of candidate MM&S.

- **Assumptions.**

- MM&S POC responses/feedback are accurate and form a sufficient basis for the assessment.
- Formal VV&A of every MM&S against both potential and current issues is too resource-intensive and is infeasible.
- The SO scenario development issues and attendant tasks are reasonable sets to derive required MM&S functionalities.

Research Methodology

- **Identify candidate MM&S; retained 26 of 30 for assessment.**
- **Assess functionality.**
 - **Stability operations scenario development.**
 - **Five Potential Issues.**
 - **Tasks in eight capability categories.**
 - **Identify required MM&S functionalities.**
 - **66 functionalities in support of 124 tasks.**
 - **Create and distribute functionality survey.**
 - **Synthesize input – create and apply selection tool.**
 - **Determine results (relative ranking) by issue and as a collective issue set.**
- **Assess utility.**
 - **Create and distribute utility questionnaire.**
 - **MM&S attributes (supportive of utility criteria).**
 - **Narrative assessment (eight capability categories).**
 - **Team rated POCs' narrative responses.**
 - **Apply utility criteria across candidate MM&S.**
- **Integrate survey results and determine relative rankings.**

Potential SO Issues

Issue #1 What Army and civilian personnel are required to conduct SO?

Issue #2* How does the Army develop a secure environment and transition security activities to host nation authorities?

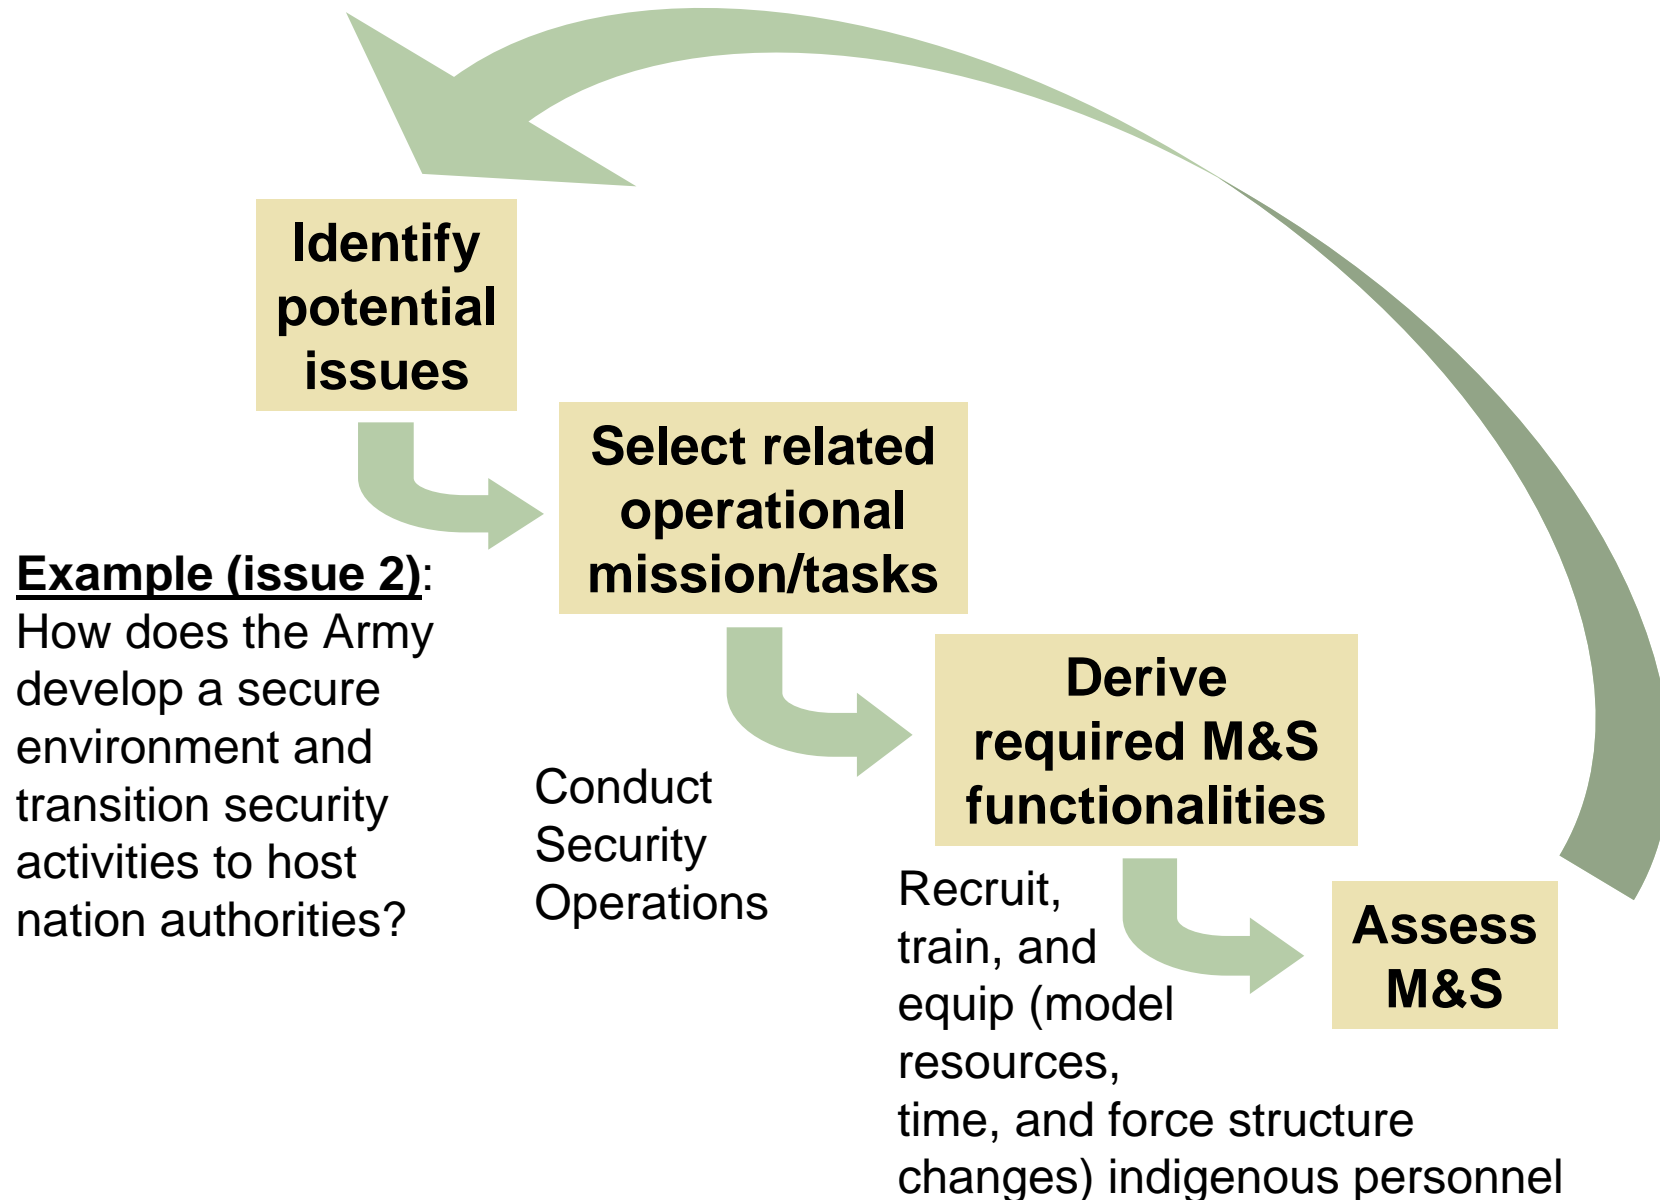

Issue #3 How can the Army share information with other government agencies, coalition forces, International Organizations, NGOs and host nation authorities supporting SO?

Issue #4 To what degree are Army, Corps, and Division staffs capable of commanding and controlling simultaneous combat and SO?

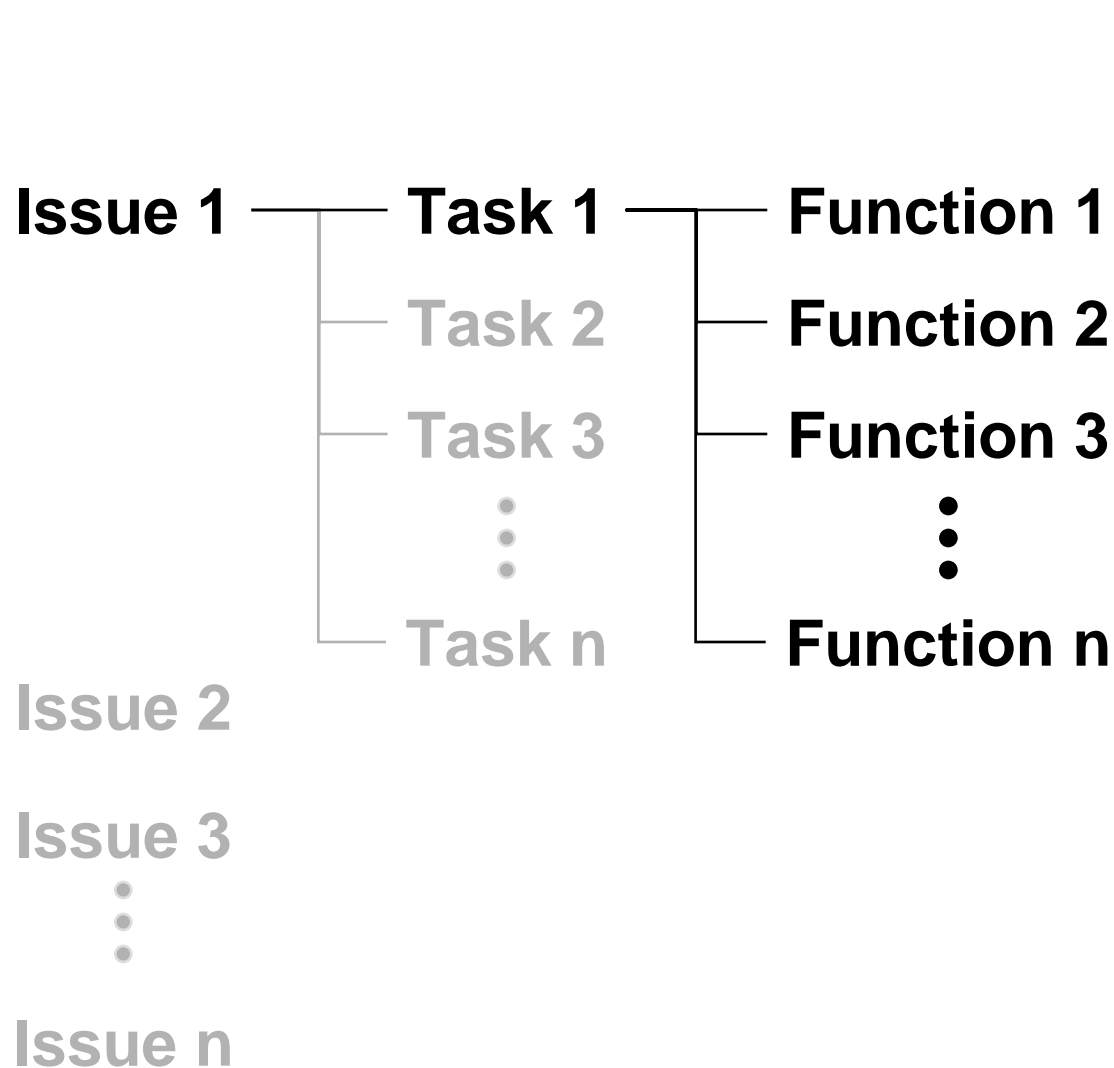

Issue #5 How does the Army evaluate host nation personnel?

***highlighted to illustrate assessment approach**

Assessment Approach: Functionality

Functionality Assessment Cross-Walk

Functionality Assessment Results

- MM&S developers self-scored their abilities to address each functionality (0 - 4).
- Data reflects relative score ranking in addressing an issue.
- Total is a sum of issue scores (possible 5.0).
- Unweighted tasks, issues, and functionalities.

Shaded – top 5

Twenty	0.25	0.16	0.24	0.19	0.19	1.02

Utility Criteria

- A. Capability to aggregate.
 - None to user defined.
- B. Maturity.
 - Established track record.
- C. Run time (real and/or faster than real time).
- D. Data input requirements.
 - Number of variables and sources.
- E. Required resources.
 - Personnel, training, HW/SW.
- F. Output flexibility.
 - Standard/pre-built reports; user definable.
- G. Availability.
 - Access, proprietary, acquisition (product or services).
- H. Portrays public opinion and its relationship with other areas of the model.
- I. Impact of political, military, economic, social, infrastructure, information (PMESII) interactions (on popular support).

**Scoring
based on
0 to 3

Application Process and Selection Tool

* new = significant/not trivial

** tradeoff judgment (func/util)

SO~stability operations MM&S~methodologies, models & simulations

Summary / Way Ahead

- **Summary.**

- Developed and applied a stability operations methodology, model, and simulation (SO MM&S) **selection process** and **tool**.
- Developed a database of 30 applications.
- Assessed and ranked them on functionality and utility.

- **Way Ahead.**

- Adopt/apply application process and selection tool in upcoming FY08 FCS stability operations (SO) analysis.
- Maintain and regularly update database of SO MM&S.
- Develop better understanding of highly ranked applications.
- Investigate implementation options.
